PROJECT REPORT:-

- NAME: Krishna Singh
- REGISTRATION NO.: 25BAI10124
- BRANCH: AIML
- YEAR: 1ST Year
- COURSE CODE: CSE0001
- DATE: 25th March 2026

Introduction:

The project is all about helping students, to be more aware about digital literacy and how to stay safe online. With almost all of our day-to-day activities being done online, whether it is studying, coding, socializing, and even doing online transactions, it is best to be aware about how to utilize digital tools in a responsible manner. This project will not only to advance my own digital literacy skills but also to help people around me to stay safe online.

For this project, I decided to choose a scenario on UPI/Online Payment Fraud, which is a growing concern among every age group in India. UPI/Online Payment Fraud is a type of fraud wherein a person gives into revealing sensitive information about themselves. I decided to come up with a case study about this type of case of fraud and how it occurs, and then come up with a checklist to prevent this type of fraud from happening to others.

Task 1:

I made my single infographic/ visual slide using Canva because its simple to use and has a lot of ready to use templates that make designing much easier. In my design, I focused on four main things about digital literacy: what digital literacy actually means, safe tools and practices on the internet for student, and professional email etiquette. I explained digital literacy as the ability to use digital tools in a effective and smart way. I also included a few important safety tips like not sharing personal information, using strong passwords. For email etiquette, I wrote about how one should always be polite and respectful as well as how they should always mention the purpose early I the email, so that the reader doesn’t have to go through the whole email to know what the email is about.

While working on my infographic, I tried to keep everything simple, basic and flattering to eyes so that anyone can quickly go through it. I used short texts instead of long bullet points so that one can easily go through. One thing I found difficult was deciding how much information to include in this single infographic slide without making it look very chaotic. But at the same time, it was actually fun to experiment with designs, shapes, etc. It was a great experience doing the tasks!

Task 2:

For this task, I created multiple profiles, like on GitHub, LinkedIn, and Stack Overflow. Each of these platforms is very useful in its own way and helps in learning different things. GitHub is mainly about sharing code and projects, making repositories, etc , so I created my profile README and added basic details about myself along with what I want to learn in my upcoming future. LinkedIn is about building a professional profile, so I updated my education section with my current degree and my specialization and expected graduation year. Stack Overflow is a platform where people's doubt get answered, which makes it really helpful when you get stuck while programming or any other thing.

In the coming four years, I plan to use GitHub to upload my projects. I will use LinkedIn to connect with people and explore opportunities and will try to stay updated about the industries. On Stack Overflow, I'll mostly use it to find solutions to my doubts, and hopefully, as I learn through my 4 year journey, I can start helping others too. I think these platforms will really help me improve my skills and grow step by step everyday!

Task 3:

For this task, I used HackerRank for coding practice and Google Forms for quiz and response sheet. On HackerRank, I tried a beginner-level problem which according to me was mildly difficult. It helped me understand how to think step by step and apply basic logic to solve a problem.

For the second part, I created a Google Form as a “Digital Literacy Awareness Quiz” with exactly five questions. I included both multiple-choice questions as well as short-answer questions so that it is easy to answer and also simple and basic, just like the requirements for the projects. I also connected the form to Google Sheet, which automatically stores all the responses, making it easy to view everything in one place .This task made me realize how useful these tools are for studies as well as for my professional skills. HackerRank can help me improve my coding skills with regular practice, and Google Forms is really helpful for creating surveys, quizzes or for even collecting data for projects.

Task 4:

A situation where there is a high chance of problems occurring because of poor communication is when a student sends an email to a professor that is not well thought out and clear. If a student decides to write an email that is very short and says something like "I'll submit later", without any explanation for why he is saying that and without any form of politeness or if no type of respect is shown, he is likely to be viewed negatively by the professor. The professor might not understand why he is saying that and might even decide to ignore his email, which could lead to him losing his marks and failing to meet the deadline. The way he communicates is what leads, creates to problems or solves the problems in this case.

Such a problem can be avoided very easily. For instance, a student can explain himself very clearly and use a very respectful and polite tone in his email.

Task 5:

While conducting my research on cybercrimes, I was literally surprised by the fact that even the most careful people can become victims of cybercrimes. I could have never imagined that attackers can create fake emails, links or messages that are exactly the same as the real ones and that can trick people into sharing sensitive information. What surprised me the most was the fact that a single mistake, like clicking on an unknown URL or sharing OTP, can lead to serious consequences like financial loss, identity theft, etc. Therefore, the habit that I want to change in my own life, as well as introduce into the life of my closed ones, is being much more careful about financial transactions and sensitive information. This habit will not only make me a safer user of the internet but will also help me, as a Digital Ambassador, guide my friends and other students towards a smarter way of using the internet.

Conclusion:

This project was a great experience, and I learned so much about digital literacy and its importance. It has also become clear to me that the smallest mistakes, such as clicking on unknown links, sharing personal or financial information, or being careless while using social media, can result in very serious consequences. While completing all the tasks like creating professional profiles, doing coding, writing professional emails, and learning about cybercrime, I have also learned skills that I can apply in my daily life. I think the project has also made me think about how I can be more cautious and responsible while using the internet. The project was not only about learning new things for myself, but it also gave me the opportunity to help my friends, etc, to be more safe while using the internet. I think the project has made me understand that learning, being aware, and being responsible are the key components of being a confident digital citizen.
